## Suhner Releases New Cordless Range for Metal Grinding and Polishing

Suhner Australia has released its all-new, portable grinders. Called the 'A' Battery Series, the range is ideal for the Australian market thanks to its cordless nature, portability and the convenience it provides users when grinding and polishing stainless steel and aluminium. The new series includes the portable ASC 9 straight grinder, the ABC 7 belt grinder, the AKC 3 fillet weld grinder and the ATC tube polisher.

Designed to provide the user with maximum flexibility, mobility and ease of use, the range is perfect for grinding and tube polishing in the workshop, on building and work sites, and difficult to reach areas. The range's mobility does not only offer easy operation, it also provides added safety as the units are cordless and have a built-in shutdown mechanism should they overheat or become overloaded.

All four models are powerful to ensure you can get the job done. They feature the latest generation of electric motor as well as efficient battery technology as standard. This technology ensures that each model's working speed is functioning at the optimal level suitable for the job. The powerful battery packs deliver a massive 18V for a total capacity of a 4 Ah to make the tools your reliable partner when grinding and polishing stainless steel and aluminium. For continuous use, all four models come with two battery packs.

Built to last, the Battery Series is also very robust and durable. A shock absorbent rubber jacket shields the battery packs from hard knocks. The tools are ergonomic, lightweight and their lean and compact design helps deliver easy operation.

The all-new cordless range of grinders and polishing tools from Suhner.

The mobile ATC 7 tube polisher is perfect for polishing stainless steel and aluminium tubes up to 48mm in diameter. It offers excellent manoeuvrability on tight elbows and its wraparound angle of at least 180° ensures fast and efficient work. It also features a detachable guard that protects the motor from coarse dust.

The AKC 3 portable fillet weld grinder was specifically developed for metalwork. It features a long neck so that you can reach tight places on railings and other metal structures. Plus, its extremely low crosshead adds to the ease with which the tool can be manoeuvred. At just 2.2kg with the battery pack, it makes handling the tool easy.

The mobile ASC 9 straight grinder works best with nonwoven brushes and flap wheels. It is perfect for removing tarnish and blending matt surfaces. It has a high torque and maintains an even speed when in use. Its chuck system minimises vibrations and ensures quiet operation of the tool. Users can choose
