

Pneumatic power tools

Suhner pneumatic tools have proved extremely successful in the industrial and handworking fields. They are used in machine fabrication, boiler construction, foundries, tool and mould manufacture and in assembly work. Their design is based on very high output with most economic air consumption. Machines are powered by strongly constructed slide vane motors, providing a most favourable power to weight ratio.

Facts:

Their construction simplifies servicing. Wearing parts can be changed easily and economically. Suhner portable pneumatic tools are quiet with low vibration. The outside housing parts of grinding machines are plastic covered and have good cold insulation properties and manageability. For the efficient operating of pneumatic tools, it is imperative that the air supply be free of condensation and dirt, with a full and constant pressure. Additionally the clean air must pass through an oil mist, to ensure lubrication of the motor and spindle bearings. These requirements are provided by means of a maintenance unit, consisting of filter, pressure regulator and oil mist unit. The working life of pneumatic tools is greatly increased.

Pneumatic power tools

Suhner pneumatic straight grinders

Offering the widest solution range available

Suhner pneumatic special application tools:

LWA 70KF for undercutting Motor commutators

LGS 30 Suhner Engraver
